Practice quiz on Sets NÚMERO TOTAL DE PONTOS 3		
1. Let $A=\{1,3,5\}.$ Is the following statement: $3\in A.$ True or false?	1/1	ponto
$\begin{tabular}{ll} $\checkmark$ & \textbf{Correto} \\ & \begin{tabular}{ll} The symbol $\in$ stands for "is an element of" and it is true that $3$ is an element of $A$ are $1$ and $5$. \end{tabular}$	ent of $\emph{A}.$ The other two	
2. Let $E=\{-1,-2,-3\}$ . Compute the cardinality $ E $ of $E$ : $ \bigcirc E $ $ \bigcirc -3 $ $ \bigcirc 0 $ $ \bigcirc 3 $		1/1 ponto
Correto $ \mbox{Recall that the cardinality of a set is the number of elements in it.} $ (which are $-1,-2,-3$ ), the cardinality of $E$ is $ E =3$ .	Since ${\cal E}$ has three elemen	nts

3.	Let $A = \{1, 3, 5\}$ and $B = \{3, 5, 10, 11, 14\}.$	1/1 ponto
	Which of the following sets is equal to the intersection $A\cap B$ ?	
	$\bigcirc$ $\{1,3,5\}$	
	$\bigcirc$ {3}	
	$\bigcirc$ {3, 5, 10}	
	<b>●</b> {3,5}	
	$\checkmark$ Correto $\label{thm:common}$ The intersection of two sets consists precisely of the elements they share in common. The elements $3$ and $5$ are in both $A$ and $B.$

# Practice quiz on the Number Line, including Inequalities

NÚMERO TOTAL DE PONTOS 8

1. Which of the following real numbers is *not* an integer?

○ 7

② 4.3

○ 0

○ -3

✓ Correto

4.3 is a decimal that is between two consecutive integers (4 and 5).

2	Mhich of the	following is	the absolute value	1 7	of the number -	77
۷.	vvnich of the	Tollowing is	the absolute value	- (	of the number -	- (:

1/1 ponto

- 7
- $\bigcirc$  0
- $\bigcirc$  1
- -7

### ✓ Correto

The absolute value of a number x is the distance along the number line from x to 0. In this case, -7 is 7 units away from 0, and so |-7|=7.

3. Suppose I tell you that x and y are two real numbers which make the statement x < y true. Which pair of numbers *cannot* be values for x and y?

1/1 ponto

- $\bigcirc \ x = -17.3$  and y = -17.1
- $\bigcirc \ \, x=-1 \text{ and } y=0$
- $\bigcirc x = 1$  and y = 7.3

### ✓ Correto

The statement x < y means that x is to the left of y on the real number line. Since 5 is to the right of 3.3, these cannot be values for x and y.

4. Suppose I tell you that w is a real number which makes both of the following statements true: w>1 and w<1.2. Which of the following numbers could be w?

1/1 ponto

- w = 1.05
- w = 1.2
- $\bigcirc w = 0$
- $\bigcirc w = 11$

## ✓ Correte

1.05>1 is true since 1.05 is to the right of 1 on the real number line, and 1.05<1.2 is also true, since 1.05 is to the left of 1.2 on the real number line.

5. Suppose that x and y are two real numbers which satisfy x+3=4y+1. Which of the following statements are false?

1/1 ponto

$$\bigcirc 2x + 6 = 8y + 2$$

- $\bigcirc x = 4y 2$
- $\bigcirc x + 2 = 4y$

### ✓ Corret

The equation x=4y cannot be derived from the given equation.

6.	Which	of the	following	real	numbers	is in	the o	open	interval (	(2.	3	)?

- 2.1
- 0 1
- O 2
- $\bigcirc$  3

Recall that the open interval (2,3) consists of all real numbers x which satisfy 2 < x < 3. Since 2.1>2 and 2.1<3 , the number 2.1 is in this open interval.

7. Which of the following real numbers are in the open ray  $(3.1, \infty)$ ?

1/1 ponto

- $\bigcirc$  0
- $\bigcirc$  3.1
- $\bigcirc$  -5

Recall that  $(3.1,\infty)=\{x\in\mathbb{R}\,|\,\,x>3.1\}.$  Since 4.75>3.1 is true,  $4.75\in(3.1,\infty).$ 

8. Which of the following values for x solves the equation -3x+2=-4

1/1 ponto

- $\bigcirc$  All values of x such that  $x \leq 2$
- $\bigcirc x = -2$
- x=\begin {align}\frac {2} {3}\end {align}

# ✓ Correto

First we subtract 2 from both sides of the given equation, to obtain -3x=-6. Finally, to isolate x we divide both sides of the equation by -3 to obtain x=2.

NOTA 83.33%

# Practice quiz on Simplification Rules and Sigma Notation

NÚMERO TOTAL DE PONTOS 6

١.	Which of the numbers below is equal to the following summation:
	\begin {align}\displaystyle{\Sigma_{i=1}^3 i^2}\end {align}?

1/1 ponto

- 30
- 14
- $\bigcirc$  1
- O 9

We compute  $\Sigma_{i=1}^3 i^2=1^2+2^3+3^2=14$ 

<sup>2.</sup> Suppose that  $A=\Sigma_{k=1}^{100}k^4$  and  $B=\Sigma_{j=1}^{100}j^4$ 

1/1 ponto

Which of the following statements is true?

- $\bigcirc A > B$
- O There is not enough information to do the problem
- $\bigcirc$  A = B
- $\bigcirc B > A$

✓ Corret

A = B. Both summations evaluate to the same number, since k and j are just dummy indices.

3. Which of the numbers below is equal to the summation  $\Sigma_{i=1}^{10}$  7?

- 70
- 07
- O 55
- 0

✓ Corret

According to one of our Sigma notation simplification rules, this summation is just equal to 10 copies of the number 7 all added together, and so we get  $10\times 7=70.$ 

<sup>4.</sup> Suppose that  $X=\Sigma_{i=1}^5 i^3$  and  $Y=\Sigma_{i=1}^5 i^4$ .

0 / 1 ponto

Which of the following expressions is equal to the summation  $\Sigma_{i=1}^5(2i^3+5i^4)$ ?

- $\bigcirc X + Y$
- $\bigcirc 2X + 5Y$
- 3375
- 07

Incorreto

If you got here, you probably just calculated the last term and stopped there.

Which of the following numbers is the mean  $\mu_Z$  of the set  $Z=\{-2,4,7\}$ ?

1/1 ponto

- 3
- O 4
- O 9
- O \begin {align} \frac{13}{3}\end {align}

To get the mean of a set of numbers, you need to perform two steps: first add them all up (in this case getting -2+4+7=9), and then divide by the number of elements in the set (in this case that number is 3).

So you should obtain  $\mu_Z = \left(\frac{9}{3} = 3\right)$  = 3\end {align}, which you did!

6. Suppose the set X has five numbers in it:  $X=\{x_1,x_2,x_3,x_4,x_5\}$ . Which of the following expression represents the mean of the set X?

1/1 ponto

- $\bigcirc \sum_{i=1}^{5} x_i$
- \begin \{\large i=1\}\^5 x\_i\\\\\ align\}
- \begin {align}\frac15 [\sum\_{{\large i=1}}^5 (x\_i-\mu\_X)^2]\end {align}
- \begin {align}\frac1N [\sum\_{{\large i=1}}^N x\_i]\end {align}

To obtain the mean of a set of numbers, you first add them all up (which is expressed here by the sigma operation inside the square brackets) and then you divide by the number of numbers in the set (which is expressed here by the \begin \align\\frac15\end \align\ outside the square brackets).

# Week 1 – Quizz 4

# Graded quiz on Sets, Number Line, Inequalities, Simplification, and Sigma Notation

	ота do e 92.3%	NVIO MAIS RECENTE
1	. Let <i>I</i>	
	~	<b>Correto</b> The symbol $\notin$ stands for "is not an element of." Since $3$ is in an element of the set $B$ , the given statement is not true.
2.	Let $A \cup B$	$B=\{1,3,5\}$ and $B=\{3,5,10,11,14\}$ . Which of the following sets is equal to the union (1/1 ponto)
	O {1	1, 10, 18}
	0 {3	3, 5, 10, 11, 14
	(1)	1, 3, 5, 10, 11, 14
	0 {1	1, 3, 5, 3, 5, 10, 11, 14
	<b>✓</b>	Correto  The union of two sets consists precisely of the elements that are in at least one of the two sets.  That is precisely what is listed here.
3.	How	many real numbers are there between the integers $1$ and $4$ ?
	O 2	
	O N	one
	O 4	
	<ul><li>Ir</li></ul>	ifinitely many
	~	Correto  There are in fact infinitely many real numbers between any pair of distinct integers, or indeed any pair of distinct real numbers!

4. Suppose I tell you that x and y are two real numbers which make the statement  $x \geq y$  true. Which pair of numbers  $\underline{cannot}$  be values for x and y?

1/1 ponto

- $\bigcirc x=2$  and y=1
- $\bigcirc \ x=10$  and y=10
- $\bigcirc$  x=-1 and y=0
- $\bigcirc \ x=5$  and y=3.3
  - ✓ Correto

Recall that the statement  $x \ge y$  means that x is either equal to y or x is to the right of y on the real number line. Since -1 is actually to the left of 0, these cannot be values for x and y.

5. Suppose that z and w are two positive numbers with z < w. Which of the following inequalities is false?

1/1 ponto

- $\bigcirc w 7 > z 7$
- $\bigcirc -z > -w$
- $\bigcirc z + 3 < w + 3$ 
  - ✓ Correto

If we start with z < w and multiply both sides by -5, we need to flip the less-than sign, which would give -5z > -5w. For an example, try z=1 and y=2 and see what happens!

6. Find the set of all x which solve the inequality  $-2x+5 \le 7$ 

1/1 ponto

- $\bigcirc x = -1$
- $\bigcirc x \ge -6$
- $\bigcirc x \leq -1$
- $x \ge -1$

### ✓ Correto

Subtracting 5 from both sides of the given inequality gives  $-2x \le 2$ . Then we divide both sides by -2, remembering to flip the inequality sign, and we obtain this answer

7. Which of the following real numbers is not in the closed interval  $\left[2,3\right]$ 

1/1 ponto

- 1
- O 2.1
- O 2
- O 3

#### ✓ Correto

Recall that the closed interval [2,3] consists of all real numbers x which satisfy  $2\leq x\leq 3$ . Since  $2\leq 1$  is false,  $1\notin [2,3]$ 

8. Which of the following intervals represents the set of all solutions to:

1/1 ponto

$$-5 \le x + 2 < 10$$
?

- $\bigcirc [-7, 8]$
- $\bigcirc$  (7,8)
- $\bigcirc [-5, 10)$

#### / Correto

Subtracting 2 from all sides of the inequalities gives  $-7 \le x < 8$ , and the set of all real numbers x which make that true is exactly the half-open interval [-7,8).

9. Which of the numbers below is equal to the following summation:  $\Sigma_{k=2}^5 2k$ ?

1/1 ponto

- O 14
- 28
- O 4
- O 10

### ✓ Correto

We compute  $\Sigma_{k=2}^5 2k = 4+6+8+10 = 28$ .

^10. Suppose we already know that  $\Sigma_{k=1}^{20}k=210$  . Which of the numbers below is equal to  $\Sigma_{k=1}^{20}2k$ ?

1/1 ponto

- 420
- O 40
- $\bigcirc$  2
- O 210

### ✓ Correte

By applying one of our Sigma notation simplification rules, we can rewrite the summation in question as  $2\left(\Sigma_{k=1}^{20}k\right)=2\times210=420.$ 

11.	Which of the numbers below is equal to the summation $\Sigma_{i=2}^{10} 7$ ?
	O 48
	O 70
	O 7
	63
	$\begin{tabular}{ll} $\checkmark$ \textbf{Correto} \\ According to one of our Sigma notation simplification rules, this summation is just equal to 9 \\ copies of the number 7 all added together, and so we get 9\cdot 7=63.$
12.	Which of the following numbers is the variance of the set $Z=\{-2,4,7\}$ ?
	$\bigcirc$ $\sqrt{14}$
	69
	O 14
	$\bigcirc$ 42
	Incorreto  If you got here, you probably just forgot all about the mean! Try reworking the problem again.
	O Coursera sugere esse material BETA O material foi útil? Sim Não
	Sigma Notation - Mean and Variance Vídeo * 12 min
1	13. Which of the following sets does <i>not</i> have zero variance? (hint: don't do any calculation here, just think!)
	$\bigcirc$ $\{2, 5, 9, 13\}$
	$\bigcirc \ \{5,5,5,5,5,5,5,5,5,5,5,5\}$
	$\bigcirc \{0,0,0,0,0,0,0\}$
	$\bigcirc \ \{1,1,1,1\}$
	✓ Correto Intuitively, the numbers in this set are spread out.
